

DOWNLOAD and INSTALLATION

The Jacobs Levy Markowitz Simulator

Bruce I. Jacobs, Kenneth N. Levy, and Harry M. Markowitz

Download and Installation

Registering

JLMSim is available as a licensed download to registered users at no charge by filling out the form on the website: <https://jlem.com/research?BETA=1#/nav/articles> > Market Simulation > Jacobs Levy Markowitz Simulator. To gain access to the software, you must agree to the license terms and register with a valid email address. Once your request is submitted, you will be sent a confirmation email with one-time use links to download the Simulator. The links will be valid for 48 hours. Please note that the registration and confirmation email are hosted by Ovis Technologies.

Updating

If you have installed a previous version of JLMSim, you can identify which version is currently installed by looking at the first few characters in the JLMSim output file names. Before installing a new version, please uninstall any previous versions using Add/Remove Programs in the Windows Control panel. You can also check the Release Notes page for any new information.

Downloading and Installing

As a registered user, you can download JLMSim by clicking on the links provided to you via email and downloading JLMSim as a compressed ZIP file. UnZIP this file and click on setup.exe to begin installation. This installation will create a Program Group called JLMSim with the following links:

- JLMSimInput - a Graphical User Interface (GUI) for entering data and maintaining information in the JLMSimInput file.
- MarketSimulator - the compiled program that runs the simulation. The program will not run until a JLMSimInput file has been generated using the Input GUI.
- JLMSimOutput - a GUI for viewing general simulation results, creating price and volume charts and exporting the Daily Reports file in an Excel format.

JLMSim can be uninstalled from Add/Remove Programs under Control Panel.
